

# Power up your hybrid learning

Now that a mix of face-to-face and online teaching is the norm, it's time to move beyond video classes and equip students with portable learning hubs that take the best of both worlds into the future of learning.

## Feel like you're together – even when you're not.

Build an engaged learning community in a protected environment where students feel safe to video conference, talk, chat, comment and brainstorm on a shared whiteboard, co-author in realtime, swap ideas, photos, videos and more!

## More ways to inspire learning.

Your curriculum, your way. As well as learning essentials like O365, OneNote, Minecraft and Paint 3D, teachers can add a huge choice of third-party applications and tools to suit their subject.

## One spot for everything.

Focus on study not finding files! For teachers to work effectively and students to stay organised, they need single sign-on to one place to collaborate with all their learning materials, assignments and applications at their fingertips.

## Expand everyone's potential.

Hybrid learning is for everyone. Students can switch on live close captioning for video calls, use dictation tools, have texts read aloud and use decoding tools for dyslexia with inbuilt assistive technologies for learning differences.

## Support and understand students.

Stay on top of students' progress with realtime analytics that track grades and show when they log in, contribute and study. Inbuilt tools let you create fun quizzes with live results, making digital formative assessment a reality.
